### How to make your brand shine

#### **Tips to improve your images**

- 1) Check for the glass seam, this is a line in the glass that goes from top to bottom. It is best if this line is not in the front where it could be seen in the photograph.
- 2) Please try to provide the most pristine bottle and label for each product being photographed. White and Rosé brands photograph best without a back label on the bottle.
- 3) Check caps that they are clean and straight and that the seam can be turned so that it does not get photographed.
- 4) Contact the studio with any specific concerns you may have about your bottles and brand.
